

HTML & CSS Practice Task: Convert Image to Code

Objective

Recreate the provided design image using **HTML** and **CSS** only.

Your goal is to recreate the layout, spacing, alignment, and overall structure of the design as closely as possible.

Requirements

- Use semantic HTML elements.
- Use an external CSS file (style.css).
- Do **not** use Bootstrap, Tailwind, or any other CSS framework.
- Do **not** use JavaScript.
- Keep the layout responsive.
- Match the design's layout, spacing, borders, border radius, shadows, and overall appearance.

Design Flexibility

To keep the focus on layout and CSS skills:

- You may use **any text content**.
- You may use **any text colors**.
- You may use **any background image** or placeholder image.
- You may use similar icons or images if the originals are unavailable.
- Fonts may be substituted with similar free fonts if necessary.

The evaluation will focus primarily on the accuracy of the layout and styling rather than matching the exact content or images.

Folder Structure

project/

|

├─ index.html

├─ style.css

├─ images/

| └─ design.png

└─ README.md

Instructions

1. Analyze the provided design image.
2. Create the HTML structure.
3. Style the page using CSS.
4. Make the page responsive for different screen sizes.
5. Organize your code for readability and maintainability.
